INSTALL SHEET (Q330 Surface Site with Wilan Telen	metry)	<del></del>
Local Date/Time: 9.20 AM GMT Date	e/Time:	
Field Team: Tanner, Pat		
GPS Location of Site:	· · · · · · · · · · · · · · · · · · ·	
Equipment		
Sensor S/N: 99726 Se	ensor Type: SI) - Z	
DIO0000 A 417 1555D BO	1043	
0330 IP - 204.114.29,54 M	510 19: 05 199	
Clock S/N:	- PK 1	
Flash Disk 1 S/N:	transmile: DVSA10119	
Flash Disk 2 S/N:	Sultch 2000 SW3	
INSTALL SENSOR	label:	
Record the declination of your compassdegrees W	//E (circle one)	
Place an arrow on the figure below showing where the declination	n marks is position on this compass (cross check	against above to
avoid sign errors)	15	
	aligned using map of	1 1.11
	Using map of	The drift
_ 5 0 5	144	
E i ĭ	VV	
	and Commence	
Guralp 3T		
Add layers of landscaping timber to provide clearance for	r this larger sensor	
Sweep any dirt from the top of the concrete base  Attach the alignment jig and use it to simultaneously leve	el and orient the sensor	
Lock feet of sensor		- 3(
Connect the sensor cable to the sensor and then to the DA Reattach the alignment jig and fill out the alignment table		
degree align and relevel before making final measuremen		is our by more unan
Trillium or STS2  X Sweep any dirt from the top of the concrete pad		
Use a ruler and sharpie to scribe an alignment line on the	concrete base for this sensor	
Connect the sensor cable to control box and sensor	oval rapact until laval and aligned (fill out table	halam
Align the sensor using the mark and the alignment rod, le	ever, repeat until level and aligned (IIII out table	below)
Cut a length of 2" fire hose to run from sensor vault to D		
✓ Use a fish tape to pull the DAS to control box cable throu ✓ Unlock masses	agh the fire hose and connect both ends	
Center masses		
Working with your partner verify the sensor is functional N/Ainstall vault cover with screws	I with a stomp test	
Cover vault with at least 2 layers of black plastic	Y 15c	
NAME Bury sensor using sandbags filled with dirt, mound dirt to	on top of vault cover, and add mulch to top	

NA

Use Brunton compass adjacent to sensor measurement jig, measuring North (N) and South (S). Reverse the jig and repeat recording the 4 measurements below. Record to your best guess of the nearest 0.1 degree. If orientation is more than 1 degree away from NS try to realign. For Trillium and STS2 sensors use left and right side of alignment rod

Brunton Left (N)	Brunton Left (S)	Brunton Right (N)	Brunton Right (S)

☑ SENSOR Unlock Procedure
CMG-3T: Attach extra power to 3T BOB. Use the BOB to test if the sensor is locked. Press and hold both the <u>Lock</u> and
<u>Enable</u> Buttons for about 10 seconds. Watch the LED light (4-6 blinks in $\sim$ 3 sec = Locked: indicates OK to
use.)  Next, unlock the sensor. Press and hold both the <i>Unlock</i> and <i>Enable</i> Buttons for about 10 seconds. Release
buttons when the LED light illuminates (2 blinks and solid red indicates unlocking.)
TURN OVER
STS-2: Use an STS-2 screwdriver to smoothly unlock all 3 elements. Give the STS-2 and initial centering pulse
using the button on the host box.

*Data packets sent <u>Z662</u>
NOTE: If the O330 does not transfer data to the Baler try clearing the Baler "association" by holding in the baler Attention

**NOTE:** If the Q330 does not transfer data to the Baler try clearing the Baler "association" by holding in the baler Attention button in until the light turns solid red (~5 sec). Release the button and then, after the light begins to flash green, press the Attention button once to shut down the Baler. Repeat the process once more and then try to transfer data to the Baler.

SITE NOTES (Anything strange or notable)

## Checklist

**Paperwork** 

✓ Completed pages 1-3

Sensor

Compass declination set and recorded

⊀ Oriented:

⊀ Level

Feet locked

Power system

XBattery terminals tight

All power box connection tight

Any external power cables to box secured from rodent damage

NA Cables in the air have drip lines

No cables are on the ground without protection

NIPSOLAR: panel boxes closed

≺ AC: battery minder plugged in powered

O330 - 1

Completed paperwork on pages 1-2

✓ Acquiring data

X All unused connectors capped

Site

Multiple layers of plastic on top of vault

Plastic configured to not collect water around sensor vault

Vault well covered with sandbags and dirt (6 inches minimum)

Cables all secured

Dog house door is secured

Cable entry plugged with plumber's putty

Frentory
